

Sophos Managed Risk

Powered by  **tenable**

Reduce cybersecurity risk with proactive attack surface vulnerability management. Sophos Managed Risk is powered by industry-leading Tenable technology and delivered as a service by Sophos threat exposure and remediation experts. Our experienced analysts identify high-priority vulnerabilities in your environment so action can be taken to prevent attacks before they disrupt your business.

USE CASES

1 | Attack surface visibility

Desired outcome: Reduce cyber risk by gaining a complete, accurate understanding of your environment and the assets most essential to your operations.

Solution: Many organizations have legacy, forgotten, or misconfigured assets that quietly expand their attack surface, and these overlooked systems are often exactly where threat actors gain a foothold. Sophos Managed Risk gives you full visibility into your internal and external environment and helps you identify and classify your most critical assets. With a clear, comprehensive view of what exists and what matters most, you can close blind spots before attackers exploit them.

2 | Continuous risk monitoring

Desired outcome: Extend your team with Tenable-certified vulnerability experts.

Solution: Sophos' highly skilled threat analysts identify exposures in your environment and review key findings with your team, enabling you to understand the overall security posture of your attack surface. We provide expert guidance on the current exploitation landscape, identify new and emerging threats, and help set remediation priorities for your business.

3 | Prioritize vulnerabilities

Desired outcome: Confidently identify and understand the exposures that pose the greatest operational and security risk first.

Solution: When every threat is a high priority, none of them are - you need to know where to focus your time and effort. Sophos Managed Risk analysts review findings, investigate emerging threats, and apply real world context to determine what truly matters. By combining extensive Tenable vulnerability coverage with expert insight and knowledge of your critical assets, Sophos Managed Risk helps you focus your time on the exposures most likely to be exploited.

4 | Identify new risks fast

Desired outcome: Know when the most severe exposures affect your applications.

Solution: Attackers look for weaknesses in your environment long before you know they're there. Identifying high-risk exposures quickly is crucial. With Sophos Managed Risk, when severe exposures are discovered that could lead to significant harm if exploited, Sophos proactively notifies your team and provides remediation guidance
